

## *Driving audio at health care facilities*

Ibermutuamur build-up new premises in Oviedo and Alicante with splittable conference rooms in both places. Gotor Comunicaciones was selected as integration company on charge to develop both projects. Media-Sys supported Gotor's engineers during project's design process for audio, video and control.

Choice for audio routing, process and amplification products was for SOLON 32A and DA4300 in both facilities. "High quality, easy to program and setup, reliable and nice look. We used SOLON series in other project for educational facility with high level of satisfaction and, that's why we always propose Tendzone's products on our projects" says Christian Sena, Amara's engineer on charge for programming and setup.
